

Digital Reception

Digital reception

Welcome your visitors and suppliers in a new modern customer-friendly way with Prestop's video call digital reception.

Security

All calls are encrypted with industry-standard encryption. Where possible, data in one-to-one calls is transmitted directly between call participants to avoid server routing.

Works on multiple platforms

Receive the call directly in the browser on computers, Android and iOS, and our convenient apps provide an even better call experience on mobile.

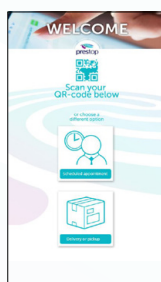

Multiple connections, multiple receivers

Assign as many conversation links and users within your account as you need. Each link can be assigned to multiple users, and a user can be assigned multiple links. The connection provider automatically handles call routing.

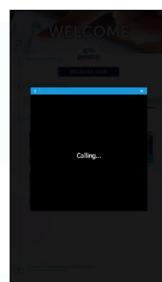

- Call contact with a video call or voice connection.
- Touchscreen operation or contactless with a QR code.
- Receive calls from the digital front desk on your smartphone or on your computer desktop.
- Mail and package delivery drivers contact the right person immediately.
- Register a visitor's badge.
- Manage your own reception(s) in an online environment.

The visitor's experience

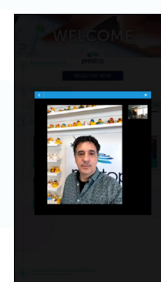

Visitors sign in by scanning a QR code or choose their contact via a menu on a touchscreen display.

Step 1
Visitor logs on

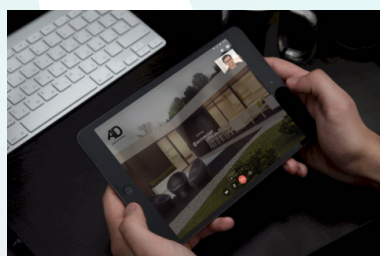

Step 2
Contact person
receives a call

Step 3
(video) call will
start on both screens

The recipient's experience

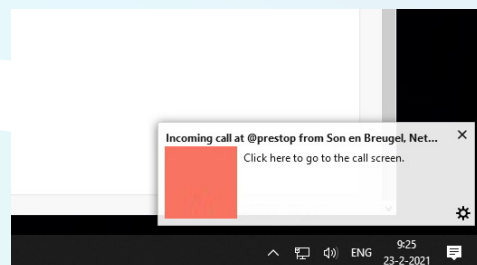

The recipient gets a notification on a tablet, phone or PC and can click/tap on this to establish the connection and thus start the call.

Receive call via your tablet.

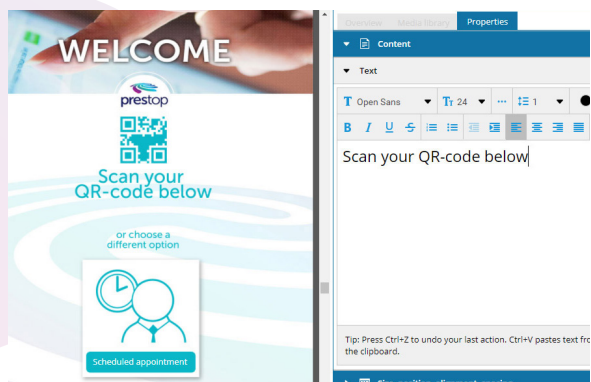

Receive call via your smartphone

Receive call via your laptop or PC.

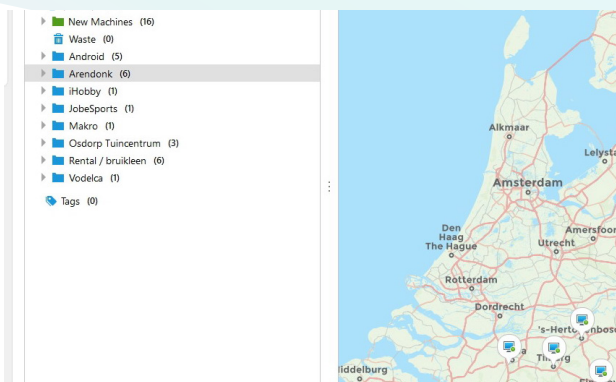

Design your own look and feel.

Design your own interface online with Sitecaster so that the reception desk matches your corporate identity.

Management

Manage the systems online and monitor everything with one login.

Online tools for the administrator.

The ability for the administrator to automatically record all incoming calls for, for example, a quality survey.

Optional Features

Beyond the standard functionalities, there are also optional features to sign the visitor in. With this, it is not necessary for the visitor to touch the screen. And they can sign in contactless registration at the digital reception.

Automatic gel dispenser

The base can be supplied with a built-in gel dispenser. To always use the screen with clean hands.

Contactless registration via QR

Direct video call/voice connection to your contact by scanning a QR code. You can insert the QR code in an invitation or for example in your E-Mail signature.

Contactless registration via sensor

Instant video call/voice connection by holding your hand in front of a motion sensor.
